

Pile Turner PW-1

turns the material
both automatically and fast

Edition: 05.2019 \ Subject to technical alterations.

Description Pile Turner PW-1

The POLAR PW-1 pile turner is mainly employed for handling the half-size format and works at a high speed saving cost and power. The pile to be turned is moved onto the platform from one side of the unit. Two pushbuttons must be pressed to close the platform. After another key is pressed the platform is turned around its horizontal axis and onto the opposite side of the unit. Two pushbuttons are pressed (and kept pressed) to open it again. Finally, the turned stack can be moved out of the platform.

Any damages or markings that cannot be avoided when the material is re-stacked manually are almost completely ruled out by automatic reversal.

The POLAR PW-1 pile turner must be fastened to the floor with anchors.

Customer benefits

- There are no long waiting times caused by manual re-stacking
- Saves the material and prevents damages
- Improves ergonomic conditions, because the lifting of heavy loads is avoided

Technical data

Format max	640 × 740 mm 25.20 × 29.13 in
Size of platform	675 × 836 mm 26.57 × 32.91 in
Pile height, min. (incl. 2 pallets)	470 mm 18.50 in
Pile height, max. (incl. 2 pallets)	1,255 mm 49.41 in
Carrying capacity, max.	500 kg 1,102 lbs
